hya-cinth [hyacinth hyacinths] *BrE* [ˈhaɪəsɪnθ] ^ˈ *NAmE* [ˈhaɪəsɪnθ] ^ˈ *noun*

a plant with a mass of small blue, white or pink flowers with a sweet smell that grow closely together around a thick ↑stem

Word Origin:

mid 16th cent. (denoting a gem): from French *hyacinthe*, via Latin from Greek *huakinthos*, denoting a plant identified with the flower in the myth of Hyacinthus, and a gem (perhaps the sapphire). In Greek mythology, Hyacinthus was a boy who Apollo loved but killed accidentally. From his blood Apollo made the hyacinth spring up. The current sense dates from the late 16th cent.
