Oxford Advanced Learners Dictionary 8th Ed.

**vac·cine** [vaccine vaccines] *BrE* [ˈvæksɪˌɪn] *NAmE* [vækˈsɪˌɪn] *noun*

countable, uncountable

a substance that is put into the blood and that protects the body from a disease

• a measles vaccine

• There is no vaccine against HIV infection.

Word Origin:late 18th cent.: from Latin **vaccinus**, from **vacca** 'cow' (because of the early use of the cowpox virus against smallpox).Example Bank:

- Researchers are trying to develop a vaccine against the disease.
- The polio vaccine has saved millions of lives.
- The vaccine protects babies and children against tuberculosis.
- a live vaccine containing the polio virus
- a vaccine for meningitis
- a vaccine to prevent rubella
- one dose of BCG vaccine

**vaccine**

Longman DOCE 5th Ed. (En-En)

**vac·cine** /ˈvæksɪˌn/\$vækˈsɪˌn/ *BrE* *AmE* *noun* [uncountable and countable]

[Date: 1700-1800; Language: Latin; Origin: vaccinus 'of a cow', from vacca 'cow', because the substance was originally obtained from sick cows]

a substance which contains a weak form of the ↑bacteria or ↑virus that causes a disease and is used to protect people from that disease:

• a polio vaccine

• Doctors worried that there would not be enough vaccine for everyone who needed it.
