blade

Oxford Advanced Learners Dictionary 8th Ed.

blade [blade blades] *BrE* [bleɪd] ^ˈ *NAmE* [bleɪd] ^ˈ **noun**

1. the flat part of a knife, tool or machine, which has a sharp edge or edges for cutting
see also ↑razor blade, ↑switchblade
2. one of the flat parts that turn around in an engine or on a ↑helicopter
 - the blades of a propeller
 - rotor blades on a helicopter
3. the flat wide part of an ↑oar (= one of the long poles that are used to ↑row a boat) that goes in the water
4. a single flat leaf of grass
 - Not a blade of grass stirred.
5. the flat metal part on the bottom of an ↑ice skate
see also ↑shoulder blade

Word Origin:

Old English blæd 'leaf of a plant' (also in sense 2), of Germanic origin; related to Dutch **blad** and German **Blatt**.

Example Bank:

- He swung the blade with all his strength.
- a helicopter's rotor blades
- Knife blades are generally made of stainless steel.
- Razor blades should always be sharp.
- The machine comes with a plastic guard over the blade to protect the operator.
- The prisoner used a hacksaw blade to cut through the bars.
- The swordsmen weaved and dodged as their blades clashed over and over again.

blade

Longman DOCE 5th Ed. (En-En)
